

Technology Graduate Program in London and New York

A unique opportunity for talented technology graduates - 15 weeks training program (5 weeks in New York, 10 weeks in London). After completion of the program you will be offered an employment contract in the company's Technology Centre in Budapest , Hungary.

The Technology Training Program is designed to develop highly skilled and motivated technologists who partner with our businesses to solve complex problems through the use of technology. The 15-week Technology Training Program curriculum includes intensive technology training, an overview of the securities industry, exposure to senior managers, professional skills workshops and a project addressing real business needs. Trainees develop a strong network of colleagues during the programme and build lasting relationships.

Trainees are aligned to one of the following curriculums during the hiring process, depending on technical skill set:

Application Development explores a broad range of software engineering technologies with the intention of developing excellent design and programming skills. Advanced techniques are explored throughout. The curriculum includes intensive and advanced work in C++, Java, Linux/Unix, Windows, Perl, .NET, C#, object-oriented analysis and design, relational databases, middleware, XML/SOAP, messaging, systems architecture, systems integration and firm-specific tools.

Computing Infrastructure consists of in-depth training in computer fundamentals, networks, databases, proprietary systems, hardware, Linux/Unix and Windows, middleware, software management and administration.

If you are interested send your application and CV in English to michaela@zeebra.cz and we will contact you to discuss this opportunity further.
